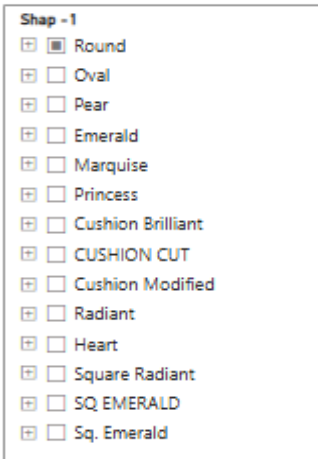
Shape-1 Slicer

Slicer allows the user to select the first hierarchy

Shape-2 Slicer



Slicer allows the user to select the second hierarchy

Issue:

This usually means the **matrix measure is not being filtered separately by Shape-1 and Shape-2**, even though the two hierarchies look different in the visual.

In other words:

- your **headers** are coming from two different hierarchy selections,
- but the **value measure** is reading from the same base filter context,
- So both columns return the same number.

What is happening

In Power BI, when you use common matrix use:

- two disconnected slicers or hierarchy tables,
- but the value measure does **not explicitly apply** the selected Shape-1 and Shape-2
